

# Regulatory & Fund- Information AI Assistant

Phase 1 Proposal — Central Depository Company (CDC)

# Tracking regulatory updates is manual, slow, and easy to fall behind on

- Staff manually monitor SECP circulars and regulator notices
- Time-consuming to read and cross-check
- Hard to quickly trace back to the original source when needed for audit/investor queries

# An AI assistant that answers regulatory questions instantly — with a citation to the source, every time

Staff ask a question in plain language and get an answer sourced only from official public documents (SECP circulars, CDC's own public site, national regulator sites)

# Zero access to internal systems or data — by design

Reads only from a public, whitelisted source list

No connection to internal documents, CRM, recordings, or reporting systems

No personalization or query history stored in Phase 1 (session-only memory)

Every answer traceable back to a specific public source document

# How It Works

## Step 1

Public sources are automatically checked for updates

## Step 2

New documents are read and indexed

## Step 3

Staff ask a question in plain language

## Step 4

Assistant answers with a citation to the exact source

# A simple chat assistant for compliance, admin, and investor-relations staff

Instant answers instead of manual document searches

Always cites its source for easy verification

Available as a plain text chat interface, no new complex software to learn

# Timeline & Investment

**4–5 weeks**

**Build Timeline**

Solo/steady effort

# Key Risks & How They're Managed

|                              |                                                                    |
|------------------------------|--------------------------------------------------------------------|
| Scanned/messy regulator PDFs | Add OCR text-recognition step                                      |
| AI answering from guesswork  | Strict rule: answer only from cited sources, or say 'I don't know' |
| Source websites changing     | Modular design per source, with failure alerts                     |

# Phase 2 will be proposed separately, once Phase 1 is live

Wider source coverage, proactive compliance alerts, and staff personalization — still with zero internal data access

# What we're asking for today

01

Approve Phase 1 build

02

Confirm the source whitelist with  
compliance

03

Agree a pilot group of staff to test with

 No internal data. No system access. Just faster, safer access to information that's already public.

**Thank you —  
questions welcome**
